Experiment 7

Student Name: Pawan Pandey

Branch: CSE

Semester: 6th

Subject: Project Based Learning in Java

UID: 22BCS10224

Section: KPIT-902

DOP: 03/04/25

Subject Code: 22CSH-359

Aim: Create Java applications with JDBC for database connectivity, CRUD operations, and MVC architecture.

Objective: To Create Java applications with JDBC for database connectivity, CRUD operations, and MVC architecture.

Easy Level:

Create a Java program to connect to a MySQL database and fetch data from a single table. The program should:

Use DriverManager and Connection objects.

Retrieve and display all records from a table named Employee with columns EmpID, Name, and Salary.

Code:

```
import java.sql.*;

import java.util.Scanner;

public class EmployeeDatabase {

    private static final String DB_URL = "jdbc:mysql://localhost:3808/test";

    private static final String USERNAME = "root";

    private static final String PASSWORD = "*****";

    public static void main(String[] args) {

        Scanner scanner = new Scanner(System.in);

        while (true) {

            System.out.println("\n=== Employee Management System ===");

            System.out.println("1) View Employee List");

            System.out.println("2) Exit");

            System.out.print("Select an option: ");
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
int option = scanner.nextInt();

if (option == 1) {
    fetchEmployees();
} else if (option == 2) {
    System.out.println("Goodbye!");
    break;
} else {
    System.out.println("Invalid choice! Please try again.");
}
}

scanner.close();
}

private static void fetchEmployees() {
    String query = "SELECT EmpID, Name, Salary FROM Employee";

    try (Connection conn = DriverManager.getConnection(DB_URL, USERNAME, PASSWORD);
        Statement stmt = conn.createStatement();
        ResultSet rs = stmt.executeQuery(query)) {

        System.out.println("\nEmployee Details:");
        System.out.println("ID | Name | Salary");
        System.out.println("-----");

        while (rs.next()) {
            System.out.printf("%d | %s | %.2f\n", rs.getInt("EmpID"), rs.getString("Name"),
rs.getDouble("Salary"));
        }
    } catch (SQLException ex) {
        System.err.println("Database connection error: " + ex.getMessage());
    }
}
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
}  
  
}  
  
}
```

Medium Level:

Build a program to perform CRUD operations (Create, Read, Update, Delete) on a database table Product with columns:

ProductID, ProductName, Price, and Quantity.

The program should include:

Menu-driven options for each operation.

Transaction handling to ensure data integrity.

Code:

```
import java.sql.*;  
  
import java.util.Scanner;  
  
  
public class ProductManager {  
  
    private static final String DB_URL = "jdbc:mysql://localhost:3808/test";  
  
    private static final String USER = "root";  
  
    private static final String PASSWORD = "*****";  
  
  
    public static void main(String[] args) {  
  
        Scanner scanner = new Scanner(System.in);  
  
        boolean running = true;  
  
  
        while (running) {  
  
            System.out.println("\n===== Product Management =====");  
  
            System.out.println("1) Add Product");  
  
            System.out.println("2) View Products");  
  
            System.out.println("3) Update Product");  
  
            System.out.println("4) Delete Product");  
  
            System.out.println("5) Exit");  
  
            System.out.print("Choose an option: ");
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
int choice = scanner.nextInt();

scanner.nextLine(); // Clear newline buffer

switch (choice) {
    case 1 -> addProduct(scanner);
    case 2 -> viewProducts();
    case 3 -> updateProduct(scanner);
    case 4 -> deleteProduct(scanner);
    case 5 -> {
        System.out.println("Exiting application...");
        running = false;
    }
    default -> System.out.println("Invalid option! Try again.");
}

scanner.close();
}

private static void addProduct(Scanner scanner) {
    System.out.print("Enter product name: ");
    String name = scanner.nextLine();
    System.out.print("Enter price: ");
    double price = scanner.nextDouble();
    System.out.print("Enter quantity: ");
    int quantity = scanner.nextInt();

    String sql = "INSERT INTO Product (ProductName, Price, Quantity) VALUES (?, ?, ?)";

    try (Connection conn = DriverManager.getConnection(DB_URL, USER, PASSWORD);
        PreparedStatement stmt = conn.prepareStatement(sql)) {
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
stmt.setString(1, name);

stmt.setDouble(2, price);

stmt.setInt(3, quantity);

    System.out.print("Enter new price: ");  
    double price = scanner.nextDouble();  
    System.out.print("Enter new quantity: ");  
    int quantity = scanner.nextInt();  
  
    String sql = "UPDATE Product SET ProductName=?, Price=?, Quantity=? WHERE ProductID=?";  
  
    try (Connection conn = DriverManager.getConnection(DB_URL, USER, PASSWORD);  
        PreparedStatement stmt = conn.prepareStatement(sql)) {  
  
        stmt.setString(1, name);  
        stmt.setDouble(2, price);  
        stmt.setInt(3, quantity);  
        stmt.setInt(4, id);  
  
        int rowsUpdated = stmt.executeUpdate();  
        if (rowsUpdated > 0) {  
            System.out.println("Product updated successfully!");  
        } else {  
            System.out.println("Product ID not found.");  
        }  
    }  
}
```

```
    }  
    } catch (SQLException ex) {  
        System.err.println("Error updating product: " + ex.getMessage());  
    }  
}  
  
private static void deleteProduct(Scanner scanner) {  
    System.out.print("Enter product ID to delete: ");  
    int id = scanner.nextInt();  
  
    String sql = "DELETE FROM Product WHERE ProductID=?";  
  
    try (Connection conn = DriverManager.getConnection(DB_URL, USER, PASSWORD);  
        PreparedStatement stmt = conn.prepareStatement(sql)) {  
  
        stmt.setInt(1, id);  
        int rowsDeleted = stmt.executeUpdate();  
  
        if (rowsDeleted > 0) {  
            System.out.println("Product deleted successfully!");  
        } else {  
            System.out.println("Product ID not found.");  
        }  
    } catch (SQLException ex) {  
        System.err.println("Error deleting product: " + ex.getMessage());  
    }  
}
```

Hard Level:

Develop a Java application using JDBC and MVC architecture to manage student data. The application should:

Use a Student class as the model with fields like StudentID, Name, Department, and Marks.

Include a database table to store student data.

Allow the user to perform CRUD operations through a simple menu-driven view.

Implement database operations in a separate controller class.

Code:

Model

```
public class Student {  
  
    private int id;  
  
    private String fullName;  
  
    private String dept;  
  
    private int score;  
  
  
    public Student(int id, String fullName, String dept, int score) {  
        this.id = id;  
        this.fullName = fullName;  
        this.dept = dept;  
        this.score = score;  
    }  
  
    // Getters and Setters  
  
    public int getId() { return id; }  
  
    public void setId(int id) { this.id = id; }  
  
  
    public String getFullName() { return fullName; }  
  
    public void setFullName(String fullName) { this.fullName = fullName; }  
  
  
    public String getDept() { return dept; }  
  
    public void setDept(String dept) { this.dept = dept; }  
  
  
    public int getScore() { return score; }  
  
    public void setScore(int score) { this.score = score; }  
}
```

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

@Override

```
public String toString() {  
    return "Student ID: " + id + ", Name: " + fullName + ", Department: " + dept + ", Score: " + score;  
}  
}
```

View

```
import java.util.List;
```

```
import java.util.Scanner;
```

```
public class StudentView {  
    private final StudentController studentController = new StudentController();  
    private final Scanner inputScanner = new Scanner(System.in);
```

```
    public void showMenu() {  
        int option;  
        do {  
            System.out.println("\n=== Student Management Portal ===");  
            System.out.println("1. Register Student");  
            System.out.println("2. Display All Students");  
            System.out.println("3. Modify Student Details");  
            System.out.println("4. Remove Student");

1.3 Hard Problem

DEPARTMENT OF

COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

Learning Outcomes:

1. **Integrating Java with Databases** – Learn how Java applications interact with databases to store and retrieve data efficiently.
2. **Enhancing Data Security** – Explore best practices for securing database connections and preventing SQL injection attacks in Java applications.
3. **Optimizing Query Performance** – Understand how to write efficient SQL queries and use indexing to improve database performance.
4. **Building Scalable Applications** – Learn how to design a Java-based system that can handle increasing data loads while maintaining performance.
